

Caroline Scott

As an aesthetician in our Bowdon Clinic, Caroline draws on her experience in skincare and dermatology to provide expert advice, both in-clinic and over the phone.

For a free consultation, you can reach her on 0161 942 1500.

Caroline is also highly qualified in the use of our state-of-the-art rejuvenation technology at Bowdon. She is able to perform the following treatments.

The following are some of the most popular treatments that Caroline performs.

Skin Peels

A number of skin peels is available at Rejuvenate by Transform. The peel solution is typically applied to the skin which then creates an even and controlled shedding of several layers of skin cells. This allows new layers to be exposed and creates a fresh appearance to the skin surface. In addition, new cells and collagen are stimulated, creating a more even skin tone. Skin peel treatments take approximately 30 minutes and are relatively painless.

Caroline can perform the following skin peel:

• Alpha Beta Peel

A gentle superficial peel that is suitable for all skin types. Gives a fresh, glowing feel to the complexion.

Skin Care & Analysis

A skin care analysis session can address any problems or questions you may have regarding your skin type and skin care regime. Skin disorders can also be discussed and diagnosed. We also have a number of skin care product ranges available.

Microdermabrasion

Microdermabrasion works by polishing the top layer of skin with a diamond tipped wand. Skin is deeply exfoliated and any dead skin cells are simply vacuumed away. It reduces fine lines and wrinkles and leaves you with fresher, smoother skin. This procedure takes a relaxing 30 minutes and is completely painless.

Omnilux

Omnilux or light therapy uses Light Emitting Diodes to treat a range of skin conditions including acne, photodamage, vitiligo, wound healing after post elective surgery and non-melanoma skin cancers. It can also be used for skin rejuvenation.

Laser Hair Removal

Using the latest laser technology, hair can be treated on any area of the body. Using a small hand-held instrument the hair is zapped by the laser, killing the hair follicle. The treatable areas will often require a series of treatments which will result in permanent hair removal. A small level of discomfort may be experienced.

We're pleased to offer consultations and treatments at a time to suit you. Early evening appointments are available.
