

Dr Philip Lamballe

MRCGP FRCS MBBS

Dr Philip Lamballe is an aesthetic practitioner who performs a wide variety of rejuvenating and anti-ageing non-surgical treatments.

Dr Lamballe has practised with Transform since 2002 whilst also retaining an active role as a General Practitioner within the NHS. He carries out a wide range of non-surgical procedures which can be tailored to suit your individual requirements.

Dr Lamballe is available for consultations and treatments at our Newcastle clinic where he and his experienced team are always happy to give advice. At these free consultations he can assess your needs and can help you decide what treatment is best for you.

The following are some of the most popular treatments that Dr Lamballe offers.

Skin Peels

Peels can help you achieve a smoother, fresher and younger complexion.

Easy TCA Peel – suitable for all skin types this superficial peel is most effective in reversing sun damage, treating acne, reducing fine lines and wrinkles, removing hyper-pigmentation, liver spots and other visible signs of ageing. It can be used to treat the face, neck, hands, forearms and chest.

TCA (Trichloroacetic Acid) Peel – a medium depth peeling agent which is suitable for the face, neck, hands, forearms and chest. This type of peel is most useful for patients with surface wrinkles, superficial blemishes, and pigmentation problems.

Obagi Blue Peel – used as a medium depth peeling agent. This type of peel is useful for patients with surface wrinkles, superficial blemishes, and pigmentation problems. It is suitable for the face, neck, hands, forearms and chest.

Dermal Fillers

Dermal fillers are fast becoming one of our most popular treatments, giving instant results and achieving a fresher, younger, smoother look without having to resort to surgery. Dermal filler treatments offered include those which have been popular for many years such as Restylane and Perlane, as well as new treatments such as Bio-Alcamid, Restylane Subq, Newfill and Hydracell.

Line and Wrinkle Smoothing

Botulinum Toxin A is commonly used to relax overactive facial muscles and reduce the appearance of lines and wrinkles.

Hyperhidrosis Treatment

Botulinum Toxin A can be used effectively to reduce excessive sweating of the underarms and hands, a condition known as Hyperhidrosis.

Thread & Varicose Vein Removal

Small blue and red spider veins can be treated with injection sclerotherapy. Patients can take advantage of a simple patch test prior to undergoing full treatment, in order to test its effectiveness. Very large bulging veins must be treated surgically.

Mole Removal/Skin Blemishes

Dr Lamballe also specialises in the removal of moles, skin tags and blemishes.

We are pleased to offer consultations and treatments at a time to suit you with evening and weekends appointments available.
